

SCI Group has partnered with EMC Corporation to deliver **ApplicationXtender®**, a complete content management solution that addresses the information management challenges of credit unions, regional banks and thrift institutions.

## What is ApplicationXtender(AX)?

EMC's AX software delivers the power of an instant document management system to make your information more affordable to store, manage and share data. Designed to meet the budget and functional requirements of enterprise departments and mid-sized organizations, AX reduces costs by streamlining the capture and management of documents and other non-electronic data.

## Benefits of Utilizing AX Software

### Powerful Search Capabilities

For organizations with indexing requirements, a full-text indexing server exists that gives users the capability to search unstructured data by providing various advanced search methods to quickly and easily locate specific information.

### Ease of Use

The system leverages and integrates with your existing IT infrastructure to manage and store virtually any kind of business content. This includes scans, faxes, MFPs, Network Directories, e-mail and eForms. SCI can provide rapid deployment and easy administration guidance without the need for additional programming.

### Future Proofed for the Next Decade

Organizations are currently upgrading to the latest operating systems, servers, databases and browsers. Our AX Software runs natively on 64-Bit Windows Servers. Browsers supported include Internet Explorer®, Safari® and Mozilla Firefox®.

### Global System

ApplicationXtender fully supports English, French, Italian, German, Spanish, Brazilian Portuguese and simplified Chinese languages. ApplicationXtender user interfaces for both desktop and web clients are also localized in these languages including online help and user guides.
